PHP Developer

NucleusLabs - Surrey, BC

Position:
NucleusLabs is actively looking for a PHP Developer. This is a permanent, full-time (40 hours / week) career position with an excellent benefits package. Target start date is within February, 2016.

Starting salary is commensurate with experience.

Job Description:
NucleusLabs is looking for a PHP Developer who will provide both code maintenance within our existing eHealth Electronic Client Records web-based platform and innovation as we grow.

The successful candidate will work directly with our development and client service/support teams, maintaining existing platform code, providing modifications based on changing client requirements and creating new functionality as needed.

The successful candidate will be expected to operate in a very dynamic environment and balance focused programming tasks with interactive team communication. Further, sharing in the Company's vision to build and grow software solutions that make a difference in people's lives in how they serve children, adults and families with special needs is highly desired.

Who We Are:
NucleusLabs is a Software as a Service (SaaS) provider of purpose-built clinical case management tools for community healthcare agencies.

We are known as a premier solution for case management of government funded healthcare programs. We work directly with Government Ministries, Health Authorities and Community Service

Agencies who, on the government's behalf, deliver a wide range of healthcare services to children, youth and adults.

Our solutions are used to primarily assist the clinical management of patients in the community healthcare area. This includes managing case files, tracking waitlists, identifying service delivery milestones, ensuring continuity of care, highlighting patient outcomes, providing scheduling tools, adhering to rules around privacy and detailed reporting on all facets of services being delivered. The focus is on affecting change at the community level for improved outcomes of the people served.

Programming Skill Requirements:

- Graduate of a Bachelor's degree in a Technical or Computing Science Field, or equivalent experience.
- Minimum two years of PHP (expert knowledge required) & web application development experience.
- Must be able to demonstrate proficient coding in an object-oriented manner using all of the OOP constructs that are part of PHP 5.
- Able to demonstrate a strong knowledge of Javascript / jQuery / JSON and AJAX.
- Have a good knowledge of XML, HTML, CSS

Database Skill Requirements:

- Demonstrate strong understanding of relational databases and SQL syntax.
- Able to analyze and normalize complex data structures.
- Understand complex table joining and indexing.
- Experience with MySQL 5.

Secondary Requirements:

- Must be comfortable learning, updating and maintaining existing PHP 5 based web applications.
- Able to adhere to development team coding standards.
- Understand Use Case Models and Dataflow Diagrams.
- Able to analyze prototype screens and produce working system components.
- Experience in working with a Linux-based operating system (e.g., Ubuntu).
- Working knowledge of PhpStorm, DVCS (Mercurial).
- Solid knowledge of the major web browsers and their debugging tools.

- Experience with FreeBSD/Linux terminal environment (via SSH) is a plus.

You Must Be:

- A Canadian Citizen or Landed Immigrant.
- Completely fluent in the English language, both spoken and written.
- Able to work onsite in Surrey (we are close to Skytrain and other transit) – no remote work.

Action:
Send the following in PDF format to hr at nucleuslabs dot com:

- **Cover Letter** – Include questions you would like to ask our **Development Manager.**
- **Resume** – Include References.
- **Code snippet** - Source code to obtain the Top 3000 ranked players including Name, Rating, Rank and Ranked Games Won from the following API: a.scrollsguide.com
- The output from the API is in JSON format. Ensure all occurrences of the following are removed: *{"msg": "success","data":* and *,"apiversion": 1}*
- The output of ranked players should be in the format of results.json or results.txt.
- Use whatever programming language you wish.

Please note: If any of these items is missing or incomplete, your application will NOT be considered. Only successful candidates will be contacted.

Hiring Process Information:
If selected based on the requirements, you will be required to:

- Perform a brief telephone interview.
- Perform a 1.5 hour PHP programming skills test at our office.
- Have a face-to-face interview at our office with both technical and support staff.

-- No phone calls or faxes please --
-- No recruiters --
